Olympus	23-24
Panasonic	25
Pentax	26
Sony	27-28

## Using these charts

If you're already familiar with our DSLR Lens Port systems, these charts provide quick reference to the product numbers recommended for each lens. If not, we recommend using the Port Finder on the Ikelite website to read more complete details on each port option. Please note the following when looking through these charts:

- Lenses are listed by *lens* manufacturer, in numerical order by focal length
- Port recommendations fit a specific lens regardless of camera model
- The Compact DSLR Housing Series, specifically for the Canon EOS 100D Rebel SL1 camera, does not support the use of these ports
- Dome ports are recommended for all wide angle and most zoom lenses
- You must add a +4 diopter to the lenses where noted—these lenses will not focus behind a dome underwater without it
- Flat ports are recommended for all macro lenses
- If you can't find your lens, visit the Ikelite website for information on measuring your lens to choose a port
- Recommendations are based on the best information we have available at the time and are subject to change without notice
- Some vignetting (dark shading in the corners of the image), lack of edge definition, and/or spherical aberration may be present depending on choice of lens and port
